Primary Art - Week 3

Speed Museum: Chalk Double Portrait

Materials:

- Chalk
- Sidewalk/driveway
- No chalk? You can make **Homemade Chalk Paint**
    - Flour or cornstarch
    - Water
    - Food coloring

    Chalk paint is made with two parts flour, one part water, and food coloring. The ratio of water to flour doesn't really matter; however, the more fluid the mixture, the easier it is to paint with. The amount of food coloring added to the mixture depends on how bright you want your colors to dry. When dry, the chalk paint mixture will be more pastel and light in color, and it does not stain the concrete. Over time with rain and sun, the homemade chalk paint will wear away.

Instructions:

1. **Click here for Chalk Double Portrait** instructions
2. **Click here** to see and learn about Francis Cotes, Double Portrait 1757 YOUR SIBLINGS
3. Take your chalk outside to the sidewalk or driveway and make art for yourself and your neighbors!
